

VENKATA PADMA GANAPATHI

Java Full Stack Engineer

padmaganapathi568@gmail.com | +44 7901504825 | [linkedin.com/in/venkatapadma](https://www.linkedin.com/in/venkatapadma) | github.com/venkatapadma | Wolverhampton

SUMMARY

Java Full Stack Engineer with ~4 years of experience building secure, cloud-native microservices using Spring Boot, Kafka, and AWS. Consistently delivered 25–35% API performance gains through caching, query optimisation, and clean architecture. Strong in OOP, SOLID, TDD/BDD, CI/CD, and React/Vue.js front-end delivery.

EXPERIENCE

Associate Software Engineer — Cognizant Technology Solutions

Nov 2021 – Mar 2025 | India | Hybrid

- Engineered enterprise microservices in Java & Spring Boot, applying SOLID principles and design patterns — reducing module complexity and clearing SonarQube gates with zero defects under tight deadlines.
- Migrated synchronous RestTemplate clients to Spring WebFlux, modernising API architecture and improving throughput for high-concurrency endpoints.
- Achieved 90%+ code coverage utilising JUnit, Mockito, PowerMockito, and Spy tests, cutting regression defects across release cycles.
- Designed relational schemas in MySQL/PostgreSQL and optimised data access via JPA/Hibernate, named native queries, and JDBC Template — contributing to a 25–35% reduction in API response times.
- Built Kafka streaming pipelines enabling real-time, asynchronous communication across microservices, decoupling services and improving fault tolerance.
- Delivered serverless components with AWS Lambda, API Gateway, SQS, DynamoDB, S3, and CloudWatch — reducing operational overhead by 35%.
- Implemented security layer using JWT, CBC-mode encryption, and AWS Secrets Manager; authored a reusable encryption module adopted across multiple services.
- Integrated AWS Cognito flows (Forgot Password, OTP, token validation), strengthening identity management across user-facing APIs.
- Performed precision Big Decimal financial calculations and built template-driven Excel pipelines to reconcile structured data from multiple third-party JSON feeds.
- Developed multi-threaded schedulers with CompletableFuture, improving background-job throughput and reducing processing latency.
- Led sprint ceremonies, demos, and global cross-team collaboration with QA, SAP, architects, and product owners; mentored junior engineers through code reviews and debugging sessions.
- Leveraged GitHub Copilot to accelerate refactoring, improve naming conventions, and raise overall code quality across the microservices estate.

Associate Professional Software Engineer — DXC Technology

Aug 2021 – Dec 2021 | India | Remote

- Redesigned data integrations and resolved dependency conflicts, improving workflow reliability by 30%; maintained production Linux servers at 99.9% uptime and automated Azure resource cleanup via Bash scripts — cutting infrastructure downtime by 25%.

PROJECTS

- Microservices Payment App** — Built on Java 21 & Spring Boot 4.0 with Kafka, Docker, Kubernetes, API Gateway, JWT, Saga pattern, Feign Client, rate limiting, Swagger, and CI/CD pipelines.
- Banking Spring Boot App** — Developed REST APIs with JPA/Hibernate and MySQL; provisioned full observability stack (Prometheus, Grafana, OpenTelemetry) and Kubernetes deployments via GitHub Actions.
- React Applications** — Delivered patient medical records and crypto-ranking dashboards; earned HackerRank Silver Badge, reinforcing component architecture and state management skills.

TECHNICAL SKILLS

Languages	Java, Python, JavaScript, TypeScript, SQL, HTML/CSS, Go (basic)
Frameworks	Spring Boot, Spring Cloud, Spring Security, Hibernate, React, Angular, Vue.js
Databases	MySQL, PostgreSQL, DynamoDB, MongoDB, Redis, Elasticsearch
Cloud & infra	AWS (Lambda, S3, SQS, Cognito, API GW, Secrets Manager), Azure (exposure), Docker, Kubernetes
Messaging	Apache Kafka, Event-Driven Architecture
DevOps	GitHub Actions, SonarQube, Prometheus, Grafana, OpenTelemetry, CI/CD
Practices	Agile/Scrum, TDD/BDD, SOLID, Design Patterns, Distributed Systems, DSA

EDUCATION & CERTIFICATIONS

B. Tech — Computer Science
BVCITS | Jul 2017 – Apr 2021

- AWS Certified Developer – Associate
- Java Full Stack Developer – Cognizant
- Oracle Cloud Infrastructure 2025 AI Foundations Associate
